RULES
FOR THE CLASSIFICATION
AND CONSTRUCTION
OF SEA-GOING SHIPS

PART I
CLASSIFICATION

ND No. 2-020101-174-E

St. Petersburg
2023
Rules for the Classification and Construction of Sea-Going Ships of Russian Maritime Register of Shipping (RS, the Register) have been approved in accordance with the established approval procedure and come into force on 1 January 2023.

The present edition of the Rules is based on the 2022 edition taking into account the amendments and additions developed immediately before publication.

The procedural requirements, unified requirements, unified interpretations and recommendations of the International Association of Classification Societies (IACS) and the relevant resolutions of the International Maritime Organization (IMO) have been taken into consideration.

The Rules are published in the following parts:
- Part I "Classification";
- Part II "Hull";
- Part III "Equipment, Arrangements and Outfit";
- Part IV "Stability";
- Part V "Subdivision";
- Part VI "Fire Protection";
- Part VII "Machinery Installations";
- Part VIII "Systems and Piping";
- Part IX "Machinery";
- Part X "Boilers, Heat Exchangers and Pressure Vessels";
- Part XI "Electrical Equipment";
- Part XII "Refrigerating Plants";
- Part XIII "Materials";
- Part XIV "Welding";
- Part XV "Automation";
- Part XVI "Structure and Strength of Fiber-Reinforced Plastic Ships";
- Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships";
- Part XVIII "Additional Requirements for Structures of Container Ships and Ships, Dedicated Primarily to Carry their Load in Containers". The text of the Part is identical to IACS UR S11A "Longitudinal Strength Standard for Container Ships" (June 2015) and S34 "Functional Requirements on Load Cases for Strength Assessment of Container Ships by Finite Element Analysis" (May 2015);
- Part XIX "Additional Requirements for Cargo Ships of Less Than 500 Gross Tonnage";
- Part XX "Additional Requirements for Yachts";
- Supplement to Rules and Guidelines of Russian Maritime Register of Shipping "IACS Procedural Requirements, Unified Requirements, Unified Interpretations and Recommendations".
### REVISION HISTORY

(purely editorial amendments are not included in the Revision History)

1 GENERAL

1.1 DEFINITIONS AND EXPLANATIONS

Definitions and explanations pertinent to the general terminology used in the normative documents of the Register are given in Part I "General Regulations for Technical Supervision" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships.

For the purpose of the Rules for the Classification and Construction of Sea-Going Ships¹ the following definitions and explanations have been adopted (unless expressly provided otherwise in particular parts of these Rules).

1.1.1 Definitions.

Barge is a non-self-propelled cargo ship designed to be towed or pushed.

Barge carrier (lighter carrier) is a dry cargo ship carrying cargo in shipborne barges (lighters).

Unmanned non-self-propelled barge (UNSP barge) is a barge that is not propelled by mechanical means, carries no oil, has no machinery fitted that may use oil or generate oil residue (sludge), has no oil fuel tank, lubricating oil tank, oily bilge water holding tank and oil residue (sludge) tank, is not used for holding sewage during transport, has no arrangements that could produce sewage, has no systems, equipment and/or machinery fitted that may generate emissions, has no crew on board and is not intended for the carriage of persons and/or living animals.

Tug is a ship specially intended for the towage and pushing of other ships and floating facilities.

Displacement of a light ship means the displacement of a ship without cargo, fuel oil, lubricating oil, ballast, fresh and boiler feed water in its tanks, provisions, consumable stores, and also without passengers, crew and their effects.

Cargo ship is any ship which is not a passenger ship (dry cargo ship, tanker, refrigerated cargo ship, icebreaker, tug, pusher, salvage ship, vessel of dredging fleet, cable laying vessel, special purpose ship and another non-passenger ship).

Hopper barge is a self-propelled or non-self-propelled ship intended for the carriage of spoil and slurry (mixture of liquid and spoil or rock formation).

Reid vapour pressure is the pressure of liquid vapour established by standard procedure in the Reid tester at the temperature of 37,8 °C and at the gas to liquid volume ratio of 4:1.

Deadweight is the difference between the displacement of a ship at the load waterline corresponding to the summer freeboard assigned for the water with a density of 1,025 t/m³ and the displacement of a light ship.

Standby vessel is a supply vessel intended to carry out rescue and standby services in offshore areas of hydrocarbon production.

Dredger (suction dredger) is a self-propelled or non-self-propelled ship intended for extraction of spoil using dredging gear (buckets, suction pipes, grabs, etc.) and having no holds for the storage or carriage of spoil. They include trailing suction hopper dredger (non-self-propelled trailing suction dredgers), multi-bucket dredgers, dipper dredgers, grab dredgers, rock dredgers, floating river-training technical units.

Historical ship (traditional craft) is a ship which, based on its age, its technical nature or construction, its rarity, its meaning for the preservation of traditional principles of seamanship or techniques of inland navigation or its significance for a period from a historic viewpoint, is worthy of being preserved, and is operated for demonstration purposes in particular, or a replica thereof.

Cable laying barge is a non-self-propelled barge intended for cable laying on the sea bottom.

¹ Hereinafter referred to as "these Rules".
**Cable laying vessel** is a self-propelled vessel intended for cable laying on the sea bottom.

**Catamaran** is a ship with two hulls connected by means of deck or truss centrebody.

**Combination carrier** is a ship intended for the carriage of crude oil and petroleum products in bulk, as well as bulk cargoes (by these ships are meant ore/oil carriers, oil/bulk dry cargo carriers and similar ships).

**Container ship** is a ship intended for the carriage of goods in containers of the international standard and provided with the cellular guides in the holds.

**Replica of a historical ship** is a ship which was largely built from original materials, using an appropriate construction method according to plans or templates as a historical ship.

**Crane ship** is a construction similar to the floating crane, but on a floating hull with ship lines or lines of a similar shape.

**Icebreaker** is a self-propelled ship intended for various types of icebreaking operations to maintain navigation in the freezing seas (for details refer to 2.2.3.1.1).

**Timber carrier** is a dry cargo ship intended for the carriage of deck timber cargo.

**Pilot ship** is a boat intended for transportation and safe embarkation/disembarkation of pilots from one board to another.

**Buoy vessel** is a vessel intended for laying of floating aids to navigation (navigation marks) in the port approaches and in the harbour, their maintenance in the harbour and retrieval as well as to perform a range of auxiliary functions.

**Place of refuge** is any naturally or artificially sheltered aquatorium which may be used as a shelter by a ship under conditions likely to endanger the safety of the ship.

The Register establishes maximum allowable distances from the places of refuge, availability and accessibility of which for different types of ships and offshore installations are determined by the Maritime Administration of the state to which area of responsibility these places of refuge relate and/or by duly authorized competent bodies (refer to IMO resolution A.949(23) as amended).

**Bulk carrier** is a ship which is intended primarily to carry dry cargoes in bulk, including such types as ore carriers and combination carriers. To apply the term "bulk carrier" correctly, one should be guided by the provisions of IMO resolution MSC.277(85).

**Roll-on/roll-off (ro-ro) ship** is a ship which has one or more decks either closed or open and cargo spaces intended for loading and unloading the cargo by roll-on/roll-off (ro-ro cargo spaces), subdivided in any way and extending to either a substantial length or the entire length of the ship, spaces in which motor vehicles with fuel in their tanks for their own propulsion, and/or goods packaged (in tare or in bulk, on rail or road cars, vehicles (including road or rail tanks), trailers, containers, pallets, demountable tanks or similar enlarged units, or other tanks) are normally loaded and unloaded in a horizontal direction.

Note. At transportation of road vehicles it is also recommended to follow the provisions of IMO resolution MSC.479(102) "Revised Guidelines for Securing Arrangements for the Transport of Road Vehicles on Ro-Ro Ships".

**Tanker** is a ship intended for the carriage of liquid cargoes in bulk, including:

- **Special tanker** is a ship intended for the bulk carriage of liquid cargoes other than oil, petroleum products and noxious liquid substances. Such ships include wine tankers, water tankers, fruit juice tankers, etc. The precise purpose of the special tanker is stated by the descriptive notation in the class notation in accordance with 2.5;

- **NLS tanker** is a ship constructed or adapted to carry a cargo of noxious liquid substances (NLS) in bulk and includes an "oil tanker" as defined in Annex I to MARPOL 73/78 when certified to carry a cargo or part cargo of noxious liquid substances in bulk;
oil tanker is a ship constructed or adapted primarily to carry oil in bulk in its cargo spaces and includes combination carriers, any NLS tanker and any gas carrier as defined in regulation 3.20 of Chapter II-1 of SOLAS-74 (as amended), when carrying a cargo or part cargo of oil in bulk.

Note. Oil means petroleum in any form including crude oil, fuel oil, sludge, oil refuse and refined products (other than those petrochemicals which are subject to the provisions of Annex II of MARPOL 73/78) and, without limiting the generality of the foregoing, includes the substances listed in Appendix I to Annex I of MARPOL 73/78;

oil tanker (> 60 °C) is a sea-going ship intended for the carriage of petroleum products having a flash point over 60 °C in bulk;

oil tanker (> 55 °C) is a ship of inland navigation intended for the carriage of petroleum products having a flash point over 55 °C in bulk;

oil recovery ship is a ship intended for recovery of crude oil and petroleum products having a flash point of 60 °C or below from the sea surface;

oil recovery ship (> 60 °C) is a ship intended for recovery of crude oil and petroleum products having a flash point above 60 °C from the sea surface;

bilge water removing ship is a ship designed to remove the bilge water from the machinery spaces of ships.

Buoyance vessels are multi-purpose vessels, sounding vessels, trawlers, buoy tenders, environmental monitoring vessels, boom-laying boats. Buoyance vessels assist in maintenance of fairway conditions in waterways and fairway aids to navigation (navigation marks), study of channel and hydrological regimes for identification of sources and reasons of drifts, development of proposals on improvement of navigational conditions, provision of real-time technical documentation for all types of engineering channel works (monitoring of fairway condition in inland waterways and in the harbours, monitoring of fairway aids to navigation (navigation marks), control of navigation lights, positioning and retrieval of aids to navigation (navigation marks) as well as their relocation when changing the fairways boundaries; maintenance of fairway marking and repair of light and signal means).

Passenger is every person other than the master and the members of the crew or other persons employed or engaged in any capacity on board a ship (special personnel) on the business of that ship, and a child under one year of age.

Passenger ship is a ship intended for or carrying more than 12 passengers.

Roll-on/roll-off passenger ship (ro-ro passenger ship) is a passenger ship with enclosed or open cargo spaces which are loaded/unloaded in a horizontal direction, or with special category spaces as defined in 1.5.4.3 and 1.5.9 of Part VI "Fire Protection". Classed among passenger ro-ro ships are also ferries, i.e. ships loaded/unloaded in the horizontal direction which regularly carry passengers and which carry vehicles with fuel in their tanks and/or railway carriages on open and/or enclosed decks at ferry crossings.

Floating crane is a crane structure on a floating hull of pontoon or similar type, which is intended for cargo handling or other working operations (mounting, undersea, hydraulic engineering, salvage, pipe laying, etc.) and may be also used for the carriage of cargoes on deck and/or in the hold.

Lightship is a non-self-propelled ship having special equipment (light appliances, fog signaling arrangements, radar beacons, etc.) intended for bounding navigational hazards and ships orientation to ensure safety of navigation.

Floating museum is a non-self-propelled floating facility, which has been moored at a quay for extended period of time, used for cultural purposes and not engaged in any carriage.

Semi-submersible ship (Docklift ship) is a dry cargo ship designed for the carriage of heavy and/or bulky cargoes for loading/unloading of which the docking method (FLO/FLO — float-on/float-off) is used.
Polar waters — includes both Arctic waters and the Antarctic area:

.1 Arctic waters are those waters which are located north of a line from the latitude 58°00',0 N and longitude 042°00',0 W to latitude 64°37',0 N, longitude 035°27',0 W and thence by a rhumb line to latitude 67°03ʹ,9 N, longitude 026°33ʹ,4 W and thence by a rhumb line to the latitude 70°49ʹ,56 N and longitude 008°59ʹ,61 W (Sørkapp, Jan Mayen) and by the southern shore of Jan Mayen to 73°31ʹ,6 N and 019°01ʹ,0 E by the Island of Bjørøya, and thence by a great circle line to the latitude 68°38ʹ,29 N and longitude 043°23ʹ,08 E (Cap Kanin Nos) and hence by the northern shore of the Asian Continent eastward to the Bering Strait and thence from the Bering Strait westward to latitude 60° N as far as Ill'unskiy and following the 60th North parallel eastward as far as and including Etoïlin Strait and thence by the northern shore of the North American continent as far south as latitude 60° N and thence eastward along parallel of 0° N, to longitude 056°37ʹ,1 W and thence to the latitude 58°00ʹ,0 N, longitude 042°00ʹ,0 W (refer to Fig. 1.1.1-1):

![Fig. 1.1.1-1](image)

Maximum extent of Arctic waters application

.2 Antarctic area is the sea area south of latitude 60° S (refer to Fig. 1.1.1-2).

---

1 It should be noted that this Figure is for illustrative purposes only.
Crew boat is a boat intended for travelling and for the carriage of not more than 12 passengers and which is not a passenger ship or a pleasure craft.

Ore carrier is a ship primarily designed for the carriage of ore, the structure of which includes longitudinal bulkheads separating the central double bottom ore hatches from the side ones.

Fishing vessel is a vessel used directly for catching or for catching and processing the catch (fish, whales, seals, walrus or other living resources of the sea).

Self-propelled ship is a ship fitted with an operating propulsion plant.

Salvage ship is a self-propelled ship intended for rendering assistance to ships in distress at sea.

Special personnel means all persons who are not passengers or members of the crew or children of under one year of age and who are carried on board in connection with the special purpose of that ship or because of special work being carried out aboard that ship. Special personnel include the following:

scientists, technicians and expeditionaries on ships engaged in research, non-commercial expeditions and survey;

---

1 It should be noted that this Figure is for illustrative purposes only.
personnel engaged in training and practical marine experience to develop seafaring skills suitable for a professional career at sea;
personnel who process the catch of fish, whales or other living resources of the sea on factory ships not engaged in catching;
salvage personnel on salvage ships, cable-laying personnel on cable laying vessels, seismic personnel on seismic survey ships, diving personnel on diving support ships, pipe-laying personnel on pipe laying vessels and crane operating personnel on floating cranes and crane ships;
other personnel similar to those referred to above who, in the opinion of the Flag State Maritime Administration, may be referred to this group.

**Berth-connected ship** is a ship or floating facility, which is in operation when lying at anchor at a water area distanced from the shore or aground or when moored at quay. These ships include floating docks, floating power plants, floating warehouses, floating oil storages, floating facilities with not more than 12 passengers on board as well as passenger floating facilities designed to take more than 12 passengers (such as for example floating hotels, hostels, restaurants, museums, workshops and the like), etc.

**LNG bunkering ship** is a gas carrier engaged in transportation of liquefied natural gas (LNG) and intended to ensure the transfer of LNG on board the ships using LNG as a fuel.

**Anchor handling vessel** is a supply vessel equipped for servicing (handling, heaving up and shifting) anchors.

**Deck carrier** is a ship designed for the carriage of general cargoes on the open deck.

**Sea coastal ship** is a self-propelled or non-self-propelled ship designed for operation in coastal sea areas and on inland waterways, taking into account the restrictions on the navigation conditions (boundaries of the navigation area, navigation season, permissible wave height with 3 % probability of exceeding level).

**Supply vessel** is a vessel designed basically for the carriage of supplies and cargoes to the mobile and fixed offshore units intended for the different purposes, and fitted generally with a forward superstructure and an after weather cargo deck for processing of the cargo at sea. The ship may be used for towing operations provided the appropriate requirements of the RS rules are complied with.

**General dry cargo ship** is a dry cargo ship intended primarily for the carriage of different package cargoes and goods (products) that are carried in packages. Such ships may periodically (i.e. not primarily) carry cargoes in bulk provided the applicable provisions of the RS rules for the carriage of bulk cargoes and, if applicable, IMO resolution MSC.277(85), as amended, are met. The ships in which the cargo loading operations are performed preferably in a horizontal direction, shall also comply with the requirements applied for a roll-on/roll-off ship (ro-ro ships). The ships in which the cargo loading operations are performed preferably in a vertical or combined direction (lo-lo ships (lift on/lift off ships), lo-ro ships) shall comply with the requirements of the RS rules, IACS and IMO normative documents related to bow, side, stern doors, ramps and inner doors and relevant requirements for ro-ro ships (as applicable). Such ships are multipurpose ships.

**Ship intended primarily to carry dry cargo in bulk** is a ship classified as a bulk carrier and her loading conditions are primarily related to bulk cargoes transportation (carriage, loading and discharge).

**Waste disposal collector vessel** (collector ship, surface debris collector, etc.) is a ship intended for reception from other ships oil residues, oily bilge waters, sewage, dry garbage and other waste for their subsequent discharge into the shore-based reception facilities.

**Ship of river-sea navigation** is a ship intended for navigation at sea and on inland waterways.
Special purpose ship is a mechanically self-propelled ship which, by reason of its function, carries on board more than 12 special personnel, including passengers (the later shall not exceed 12 passengers, otherwise such ship should not be considered a special purpose ship as it is a passenger ship). Such ships include research, expedition, hydrographic, training ships; whale and fish factory ships, factory ships and other ships engaged in processing of living resources of the sea and not engaged in catching; salvage ships, cable laying vessels, seismic survey ships, diving support ships, pipe laying vessels, floating cranes and crane ships.

Technical and auxiliary fleet vessel is a ship designed for maintenance of ships and waterways, port facilities, underwater mining etc. (dredgers, suction dredgers, rock dredgers, snag boats and river-training ships, hopper barges, multcats, buoy vessels, buoyance vessels and crew boats designed for navigation support, ecological monitoring and analysis of water environment, bottom soil and ambient air).

Shipborne barge (lighter) is a non-self-propelled cargo ship unmanned and appropriated for transportation in specially equipped ships (barge and lighter carriers) and for towing (pushing) within the specified restricted area of navigation.

Dry cargo ship is a ship intended for the carriage of different cargoes (general cargoes, containers, timber, bulk cargoes, etc.), except for the liquid bulk cargoes.

Pontoon for technological services is a non-self-propelled unmanned ship intended for working operations and having no hatches on deck, except for small manholes for access into the hull, which are closed by covers with seal gaskets.

Refrigerated cargo ship is a ship intended for the carriage of perishable commodities which require temperature control in cargo spaces and/or thermally insulated containers. Types of carried goods are fruit (bananas, etc.), meat, fish, vegetables, dairy products and other items.

Pontoon is a non-self-propelled unmanned ship intended for the carriage of deck cargo and having no hatches on deck, except for small manholes for access into the hull, which are closed by covers with seal gaskets.

Pipe laying barge is a non-self-propelled barge intended for laying the pipelines on the seabed.

Pipe laying vessel is a self-propelled vessel intended for laying the pipelines on the seabed.

Hopper dredger is a self-propelled or non-self-propelled ship intended for the extraction of spoil using dredging gear (buckets, suction pipes, grabs, etc.) and having holds for the storage or carriage of spoil.

Crew means all persons carried on board the ship to provide navigation and maintenance of the ship, its machinery, systems and arrangements essential for propulsion and safe navigation or to provide services for other persons on board.

Crew of a fishing vessel means persons engaged in any business on board a ship connected with its purpose.

Environmental monitoring vessel is a ship intended for monitoring of coastal zone of water basins.

Escort tug is a tug intended for escort service (steering, braking and otherwise controlling the assisted ship).

Definitions of particular types of ships (nuclear ships and offshore installations, nuclear support vessels, high-speed craft, dynamically supported craft, small WIG craft, gas carriers, chemical tankers, pleasure craft, drilling ships, mobile offshore drilling units and fixed offshore platforms, floating offshore oil-and-gas product units, manned submersibles and diving systems, small craft, sport sailing vessels) are given in the relevant RS rules for such types of ships.

The list of the RS rules is given in 1.3 of the General Regulations for the Classification and Other Activity.
1.1.2 Explanations.
For the purpose of these Rules classification means development, publication and application of the rules continuous compliance with which will, along with the proper maintenance of the ship by the owner or by the operator, ensure:
- structural strength and integrity of the hull and its elements including structural fire protection;
- seaworthiness (stability) of the ship under all specified loading conditions and under particular sea-and-wind conditions;
- safe and reliable operation of its propulsion plant, systems and devices for ship control, other systems, auxiliary machinery and equipment including fire-fighting equipment, and thereby permit safe operation of the ship in accordance with its purpose.

**Date of contract for construction of a ship (series of ships):**

.1 the date of "contract for construction" of a ship is the date on which the contract to build the ship is signed between the prospective owner and the shipbuilder. This date and the construction numbers (i.e. hull numbers) of all the ships included in the contract shall be declared to the Register by the party applying for the assignment of class to a newbuilding;

.2 the date of "contract for construction" of a series of ships, including specified optional ships for which the option is ultimately exercised, is the date on which the contract to build the series is signed between the prospective owner and the shipbuilder.

Ships built under a single contract for construction are considered a "series of ships" if they are built to the same approved plans for classification purposes. However, ships within a series may have design alterations from the original design provided:

.2.1 such alterations do not affect matters related to classification; or
.2.2 if the alterations are subject to classification requirements, these alterations shall comply with the classification requirements in effect on the date on which the alterations are contracted between the prospective owner and the shipbuilder or, in the absence of the alteration contract, comply with the classification requirements in effect on the date on which the alterations are submitted to the Register for approval.

The optional ships will be considered part of the same series of ships if the option is exercised not later than 1 year after the contract to build the series was signed;

.3 if a contract for construction is later amended to include additional ships or additional options, the date of "contract for construction" for such ships is the date on which the amendment to the contract, is signed between the prospective owner and the shipbuilder. The amendment to the contract shall be considered as a "new contract" to which the above explanations apply;

.4 if a contract for construction is amended to change the ship type, the date of "contract for construction" of this modified ship or ships is the date on which revised contract or new contract is signed between the shipowner, or shipowners and the shipbuilder.

**Notes:** 1. By optional ships, ships are meant, which are included in the contract with the condition of the additional confirmation of their construction (order) by a prospective owner.

2. This explanation became effective on 1 July 2009.

**Additional requirements** are the requirements caused by the item features or its operational conditions, which are not stipulated by the rules imposed by the Register in writing to ensure the safety of items of technical supervision.

**Measurement of distances** — unless explicitly stipulated otherwise in the text of the regulations in SOLAS Convention, International Convention on Load Lines and MARPOL Convention and any of their mandatory Codes, as well as in the text of the RS rules and guidelines, distances (such as tank length, height, width, ship (or subdivision or waterline) length, etc.) shall be measured by using moulded dimensions.

**Register class (class)** is a combination of conventional characters and descriptive notations assigned to the ships, other floating facilities, as well as to fixed offshore platforms, which define their structural features, purpose and operational conditions stipulated by the RS rules.
Operator is a physical person or legal entity operating a ship on the basis of a contract concluded with an owner or shipowner.

Rules (the RS rules) are the set of the regulating and technical requirements for objects under technical supervision.

The RS rules are listed in 1.3, General Regulations for the Classification and Other Activity.

Recognized standards are national and international standards referred to in the appropriate parts of the RS rules.

Owner is a physical person or legal entity having proprietary rights to a ship irrespective of the fact whether he (she) or it operates the ship on his (her) or its own, or has placed it in the operation of another person or entity whether on the fiduciary or some other legal basis.

Dual class is a class of a ship classed with two societies entered into Dual Classification Agreement.

Agreed standards are national and international standards, as well as standards of firms (organizations) specified in the Register approved technical documentation on materials and products, and agreed upon by the Register in compliance with the requirements of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships.

Special consideration is the determination of the extent, to which an object under technical supervision meets the additional requirements.

Ship under construction is a ship during a period from the keel laying date till the date of issuing the documents for a ship.

Keel laying date means: the date (day, month, year) on which the installation at the building berth of a base section or block (island) in section or block (island) construction respectively, or such a stage of construction at which construction identifiable with a specific ship begins and assembly of that ship has commenced comprising at least 50 or 1% of the estimated mass of all structural materials, whichever is less.

For fiber-reinforced plastic (FRP) ships, the keel laying date shall be interpreted as the date that the first structural reinforcement of the complete thickness of the approved laminate schedule is laid either in or on the mould.

Ship in service is a ship which is not under construction.

Shipowner is a physical person or legal entity operating a ship on his (her) or its own behalf irrespective of the fact whether he (she) or it is the owner or is operating the ship on some other legal basis.
1.2 APPLICATION

1.2.1 Rules for the Classification and Construction of Sea-Going Ships apply to:
   1. self-propelled passenger and cargo ships with the main engines of output 55 kW and upwards;
   2. non-self-propelled ships of 80 gross tonnage and upwards, and in case of availability of machinery and equipment of total power output of prime movers 100 kW and upwards — irrespective of their gross tonnage;
   3. materials and products that shall be installed on the above ships (lists of relevant materials and products are given in the appropriate parts of these Rules);
   4. ship refrigerating plants stated in 4.1.1 of this Part.

1.2.2 These Rules also apply to the following types of ships and offshore installations to the extent specified in the relevant rules for their classification and construction:
   1. nuclear ships and floating facilities (refer to the Rules for the Classification and Construction of Nuclear Ships and Nuclear Support Vessels);
   2. nuclear support vessels (refer to the Rules for the Classification and Construction of Nuclear Ships and Nuclear Support Vessels);
   3. gas carriers (refer to the Rules for the Classification and Construction of Ships Carrying Liquefied Gases in Bulk and Rules for the Classification and Construction of Ships Carrying Compressed Natural Gas);
   4. chemical tankers (refer to the Rules for the Classification and Construction of Chemical Tankers);
   5. mobile offshore drilling units and fixed offshore platforms (refer to the Rules for the Classification, Construction and Equipment of Mobile Offshore Drilling Units and Fixed Offshore Platforms);
   6. high-speed craft (refer to the Rules for the Classification and Construction of High-Speed Craft);
   7. type A WIG craft (refer to the Rules for the Classification and Construction of Type A WIG Craft);
   8. manned submersibles, ship's diving systems (refer to the Rules for the Classification and Construction of Manned Submersibles and Ship's Diving Systems);
   9. pleasure craft (refer to the Rules for the Classification and Construction of Pleasure Craft);
   10. small sea fishing vessels (refer to the Rules for the Classification and Construction of Small Sea Fishing Vessels);
   11. floating offshore oil-and-gas product units (refer to the Rules for the Classification and Construction of Floating Offshore Oil-and-Gas Product Units (hereinafter referred to as the "FPU Rules ") and the Rules for the Equipment of Floating Offshore Oil-and-Gas Product Units (hereinafter referred to as the "FPU Equipment Rules").

1.2.3 With the Register consent, these Rules may be applied for the classification of ships not specified in 1.2.1 and 1.2.2.

1.2.4 These Rules apply to special purpose ships of not less than 500 gross tonnage. On agreement with the Register, the requirements of these Rules may also apply as far as reasonable and practicable to special purpose ships of less than 500 gross tonnage.

1.2.5 These Rules set down the requirements regulating the assignment of class to a ship or a shipboard refrigerating plant.

1.2.6 Confirmation of compliance with the requirements of the RS rules is the Register prerogative and is carried out in accordance with the procedure established by it.

Any statements to the effect a supervised item complies with the RS rules requirements, which are made or documentally supported by a body other than the Register and which are not confirmed by the latter in accordance with the established procedure, cannot be considered as evidence of such a compliance.
1.3 COMPLIANCE WITH STATUTORY REQUIREMENTS

1.3.1 As far as practicable, the RS rules consider the requirements of international conventions and codes coming within the Register terms of reference (refer to 2.5, General Regulations for the Classification and Other Activity). Some of them are directly incorporated in the text of the RS rules, while others are referred to in the text of the RS rules.
2 CLASS OF A SHIP

2.1 GENERAL

2.1.1 Assignment of the Register class to a ship means confirmation by the Register that the ship construction complies with the applicable requirements of the RS rules and its technical condition complies with the conditions of the ship operation; the ship is registered with the Register for a specified period with performing the surveys stipulated by the Rules for the Classification Surveys of Ships for this period.

2.1.2 The Register may assign a class to a ship proceeding from the results of survey during its construction, as well as assign or renew a class to a ship in service.

2.1.3 Renewal of a ship's class means confirmation by the Register that the ship and her technical condition comply with the provisions based on which a class has been previously assigned as well as issuance of the Register documents for a period as required by the Rules for the Classification Surveys of Ships in Service.

2.1.4 Class of a ship is, generally, assigned or renewed by the Register for 5 years, however, in sound cases the Register may assign or renew a class for a lesser period.

2.1.5 If a ship has the valid Register class, this means that the ship's technical condition in full measure or to a degree considered adequate by the Register complies with the requirements of the RS rules, which apply to it according to its purpose, operating conditions and class notation. The validity of the ship's class shall be confirmed by the valid Classification Certificate or the Statement of Laid-up Ship (in case the ship is laid up in compliance with the requirements of 4.10 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service) available on board.

2.1.6 Classification Certificate becomes invalid and classification is automatically suspended in the following cases:

1. when the ship as whole or her separate elements have not been subjected to scheduled periodical or occasional surveys in specified terms (if the special survey has not been completed or the ship is not under attendance for completion prior to resuming trading, by the due date);

2. if the annual survey has not been completed within three (3) months of the due date of the annual survey;

3. if the intermediate survey has not been completed within three (3) months of the due date of the third annual survey in each periodic survey cycle;

4. unless the ship is under attendance for completion of the relevant survey if in the RS rules it is not required otherwise;

5. after an accident (the ship shall be submitted for occasional survey at port where the accident took place or at the first port of call, if the accident took place at sea);

6. when alterations not agreed with the Register have taken place in the ship structure, equipment and outfit and her arrangements;

7. when repair, modernization/conversion of a ship or ship's elements have been performed without approval and technical supervision by the Register;

8. when a ship navigates with a draught exceeding that specified by the Register for specific conditions as well as in case of operation of a ship in conditions which do not comply with the requirements for assigned class of a ship or the restrictions specified by the Register;

9. when the prescribed specific requirements, which during previous survey of the ship were the conditions for assignment or retainment of the Register class, have not been fulfilled within the specified period;

10. when the process of surveying the ship by the Register has been suspended on the shipowner's initiative or through his (her) or its fault;

11. when the ship has been taken out of service for a long period (more than 3 months) for fulfilment of the Register requirements (except the case when a ship is under repair for these purposes);
.12 in case of the ship’s seizure by pirates;
.13 after the ship was abandoned by the crew.

The Register shall specially notify the shipowner of suspension of a ship’s class and Classification Certificate.

2.1.7 Ship class and Classification Certificate may be suspended following a decision made by the Register when the commitments to the Register (including those on payment for its services) fail to be performed or are improperly performed as well as in other cases specified in the RS rules.

2.1.8 Suspended (as stated in 2.1.6) class of a ship may be reinstated on the basis of satisfactory results of the appropriate periodical or occasional survey carried out by the Register in the case of a ship being submitted for survey. In so doing when the ship is taken out of service for a long period (more than 3 months), the scope of survey for reinstatement of a ship’s class shall be specially established by the Register taking into account the age and condition of the ship as well as the period for which she is taken out of service.

During the period from suspension of class to its reinstatement or renewal, the ship is considered to have been lost the Register class. In case of class suspension, the Classification Certificate becomes invalid. The class may be suspended for a period of no more than six months unless expressly provided otherwise by the RS rules and normative documents.

2.1.9 The class of a ship is withdrawn by the Register in the following cases:
.1 upon expiration of the maximum term of class suspension;
.2 when the Register and/or shipowner consider reinstatement of the class suspended as stated in 2.1.6 to be impossible;
.3 upon transfer of the ship to the class of another classification body;
.4 at the request of the shipowner;
.5 due to ship’s loss or her decommissioning as well as in case of obtaining information from the shipowner on the ship demolition or selling for scrapping.

Withdrawal of the ship’s class means termination of technical supervision by the Register and invalidation of the Classification Certificate.

2.1.10 After assignment of class, the Register introduces the sea-going self-propelled ships of 100 gross tonnage and upwards into the Register of Ships and excludes them in case of withdrawal of class.
2.2 CLASS NOTATION OF A SHIP. MANDATORY AND OPTIONAL DISTINGUISHING MARKS AND DESCRIPTIVE NOTATIONS IN THE CLASS NOTATION ASSIGNED BY RUSSIAN MARITIME REGISTER OF SHIPPING

Ships and offshore installations, complying fully or to a degree considered adequate by the Register with the relevant requirements of the RS rules, are assigned the RS class with the class notation as specified below.

The class notation assigned by the Register to a ship or offshore installation consists of the character of classification, descriptive notations and mandatory/optional distinguishing marks defining structure and purpose of a ship or offshore installation.

The character of classification, descriptive notations and mandatory distinguishing marks stipulate requirements for the following:
- availability of main functions and the safety of installations supporting the main functions;
- structural strength and integrity of essential parts of the ship's hull and the offshore installation;
- safety of machinery installations, systems, mechanisms and equipment supporting non-main functions that constitute possible hazards to personnel and ship.

Optional distinguishing marks include requirements to safety levels and availability of equipment beyond those of the character of classification and mandatory distinguishing marks and descriptive notations.

The sequence of descriptive notations as well as mandatory and optional (if any) distinguishing marks being added in the class notation of a ship is set down by the provisions of this Chapter as well as by relevant provisions concerning the class notation included in rules for the classification and construction of ships of special types, as listed under 1.2.2, with account of Table 2.2.

The summary information on distinguishing marks and descriptive notations is given in 2.5.

</table>

**Notes:** 1. If ships or offshore installations are fitted with a nuclear power unit and comply with the requirements of the Rules for the Classification and Construction of Nuclear Ships and Nuclear Support Vessels and these Rules, the symbol ★ is added before the character of classification.
Sequence of indication of distinguishing marks and descriptive notations in class symbol | RS distinguishing marks and descriptive notations
--- | ---
2. If the scope of the RS rules requirements which a ship complies with allows, two and more descriptive notations may be stated in the class notation of a ship (e.g. Supply vessel, Salvage ship, Tug), or the descriptive notation may be written as a combination of descriptive notations (e.g. Oil/bulk carrier, Oil/bulk/ore carrier, etc.).
3. For self-propelled ships, when adding descriptive notations to the character of classification such as Chemical tanker, Oil tanker, Bulk carrier, Self-unloading bulk carrier, Ore carrier or their combinations (Oil/bulk carrier, Oil/ore carrier, etc.), the distinguishing mark (ESP) shall be mandatory added after the descriptive notation. This means the necessity to survey these ships based on the Enhanced Survey Programme. For example: Oil/ore carrier (> 60 °C) (ESP).
4. For oil tankers and bulk carriers fully complying with the requirements of the Common Structural Rules for Bulk Carriers and Oil Tankers¹, the distinguishing mark CSR shall be mandatory added after descriptive notation.
5. When particular scope of the RS rules requirements, serving as the basis for introduction of the appropriate distinguishing marks in the class notation, is met only under limitations specified by the Register, the limitations, exceeding which these distinguishing marks will become invalid, shall be indicated in the class notation in brackets after such distinguishing marks, e.g. KM AppComponentOutputStream2Arc7 (hull at d ≤ 8, 44 m; machinery) 2 (at d ≤ 8, 4 m) AUTZ Ro-ro ship.
At the shipowner's discretion, at the assignment of ice class limitation for ships, maximum draught in fresh water, at which the RS requirements for the specified ice class are complied with, may be additionally indicated, e.g. Arc7 (hull at d/d1 ≤ 11, 0 m/11,265 m; machinery), where d1 is the maximum draught in fresh water at which the requirements for ice class are met and which is determined as the sum of draught d and fresh water allowance in accordance with Formula (4.5.5.1) of the Load Line Rules for Sea-Going Ships.
6. In the class notations of nuclear ships and offshore installations, nuclear support vessels, gas carriers, chemical tankers, high-speed craft, type A WIG craft, small sea fishing vessels, mobile offshore drilling units, fixed offshore platforms, floating offshore oil-and-gas product units, manned submersibles and diving systems, sea-going pleasure craft, the distinguishing marks and descriptive notations shall be inserted in conformity with the provisions of rules for the classification and construction of the relevant types of ships (refer to 1.2.2).
7. For ships with descriptive notation Berth-connected ship, operation conditions (one of the following conditions: aground (G) — ground or moored at quay (S) — shore, or when at a water area distance from the shore (W) — waters) are indicated in brackets, and the descriptive notation Berth-connected ship is followed by the statement of ship or offshore installation purpose from those listed in the definition "Berth-connected ship" (refer to 1.1.1), or otherwise. If the berthed-connected ship complies with the relevant requirements of these Rules for different operation conditions, the operation conditions are listed in brackets after the descriptive notation and separated by comma, for example: (W, S). Descriptive notation Berth-connected ship (operation condition) floating oil storage may be added in each particular case upon agreement with the Register Head Office (RHO) and, if necessary, upon agreement with the Flag State Maritime Administration in the class notation of a ship complying with the requirements for an oil tanker, which cannot be classified as FSO in accordance with the Rules for the Classification and Construction of Floating Offshore Oil-and-Gas Product Units (FPU) (refer also to FSU according to IMO resolution MEPC.311(73)), and intended only for loading/unloading and storage of oil and petroleum products. Previously assigned descriptive notation (e.g. oil tanker (ESP)) may be retained at the shipowner's discretion provided the RS requirements relating to such descriptive notation or distinguishing mark are complied with.
8. Floating museums are assigned descriptive notation Berth-connected floating museum (operation condition), and additionally, operation conditions: moored at quay (S) — shore, is indicated in brackets.
9. Classification of small craft consists in establishing a category of navigation in accordance with the Rules for the Classification and Survey of Small Craft.

¹ Hereinafter referred to as "the Common Structural Rules".

---

Rules for the Classification and Construction of Sea-Going Ships (Part I)
Sequence of indication of distinguishing marks and descriptive notations in class symbol | RS distinguishing marks and descriptive notations
--- | ---

2. Classification of sailing racing yachts consists in establishing a category of navigation in accordance with the Rules for the Classification and Survey of Sailing Racing Yachts (approved by Government Decree of Russian Federation No. 820 dated September 18, 2013), the Rules for the Design, Construction, Repair and Operation of Sailing Racing Yachts, Manufacture of Materials and Products for Installation on Board Sailing Racing Yachts.

5. Classification of sailing racing yachts consists in establishing a category of navigation in accordance with the Rules for the Classification and Survey of Sailing Racing Yachts (approved by Government Decree of Russian Federation No. 820 dated September 18, 2013), the Rules for the Design, Construction, Repair and Operation of Sailing Racing Yachts, Manufacture of Materials and Products for Installation on Board Sailing Racing Yachts.

7. Classification of sailing racing yachts consists in establishing a category of navigation in accordance with the Rules for the Classification and Survey of Sailing Racing Yachts (approved by Government Decree of Russian Federation No. 820 dated September 18, 2013), the Rules for the Design, Construction, Repair and Operation of Sailing Racing Yachts, Manufacture of Materials and Products for Installation on Board Sailing Racing Yachts.

2.2.1 The character of classification assigned by the Register to a ship or floating facility consists of distinguishing marks:

- **КМ** — for self-propelled ships and offshore installations;
- **КЕ** — for non-self-propelled ships and offshore installations.

2.2.2 Depending on the rules on the basis of which a ship or an offshore installation was surveyed, and the classification society which carried out the survey, the character of classification is established as follows:

1. Ships and offshore installations built according to the rules of and surveyed by the Register are assigned a class notation with the character of classification: **КМ** or **КЕ** (refer to 2.2.1);

2. Ships and offshore installations built according to the rules of ACS — IACS member and surveyed by that society during their construction, when classed by the Register are assigned a class notation with the character of classification: **КМ** or **КЕ** (refer to 2.2.1). For classification of such ships and offshore installations the provisions of 1.2.2 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service shall apply;

3. Ships and offshore installations which were as a whole (or their hull or machinery installation, or machinery, or equipment) built and/or manufactured without being surveyed by ACS — IACS member or without being surveyed by any classification society, when classed by the Register are assigned a class notation with the character of classification: **КМ** or **КЕ** (refer to 2.2.1). For classification of such ships and offshore installations the provisions of 1.2.3 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service shall apply;

4. Ships and offshore installations built according to the RS rules and the rules of ACS — IACS member, and classed with the Register along with ACS — IACS member (dual class), are assigned a class notation with the character of classification: **КМ** or **КЕ** (refer to 2.2.1). Under the dual class arrangement, each classification society acts on behalf of the other classification society in accordance with the Dual Classification Agreement, taking into account the requirements of Section 16, Part I "General Regulations for Technical Supervision" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships. The scope of work and the authority of each society during approval of design documentation, certification of materials and products, survey during construction, initial survey after construction, including issuance of statutory certificates (if applicable) are regulated by the Dual Classification Agreement.

2.2.3 The Register ice class marks, the IACS polar class notations and the Baltic ice class notations.

2.2.3.1 Ice class marks are assigned to icebreakers and ice class ships in compliance with the requirements of 2.2.3.2 — 2.2.3.5 of this Part.

The IACS polar class notations are assigned to polar class ships in accordance with the requirements of Section 1 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".
The Baltic ice class notations are assigned to the Baltic ice class ships in compliance with the requirements of Section 10 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".

The IACS polar class notations and the Baltic ice class notations are assigned at the shipowner's discretion. At the same time, for the RS-classed icebreakers ice class marks are assigned in compliance with the requirements of 2.2.3.2.

At the shipowner's discretion the IACS polar class notations and the Baltic ice class notations may be applied simultaneously with the Register ice class marks (double or triple ice class), provided such ships comply with the requirements for the IACS polar class ships and/or the Baltic ice class ships, and the Register ice class ships.

2.2.3.1.1 Icebreakers are specialized ships intended for all kinds of icebreaking operations: escort of ships in ice, surmount of ice ridges, breaking of a navigable channel, towing, breaking of ice and rescue operations. There are two main regimes of ice navigation while performing icebreaking operations: continuous motion and ramming.

2.2.3.1.2 Ice class ships are ships intended for independent ice navigation including motion in fractures between floes, surmounting of ice isthmuses and portions of relatively thin compact ice, or navigation in ice with icebreaker escort.

2.2.3.1.3 The following definitions are used for the description of ice navigation conditions:
- ice concentration is a measure of ice continuity, which is characterized by the ratio of the area covered by ice to the total water area using 10 number scale;
- open floating ice is ice of concentration 4 — 6, where most of the floes do not touch each other;
- close floating ice is ice of concentration 7 — 8 where most of the floes touch each other forming ice isthmuses;
- very close floating ice is ice of concentration 9 or over, but less than 10; compact ice is ice of concentration 10;
- multi-year ice is ice of thickness more than 3,0 m, which has survived at least two summers' melt;
- second-year ice is ice of thickness from 2,0 to 3,0 m, which has survived only one summer's melt;
- first-year ice is ice of thickness from 0,3 to 2,0 m, of not more than one winter's growth;
- ice cake is any relatively flat piece of sea ice less than 20 m across.

2.2.3.2 If an icebreaker complies with the requirements of Parts II "Hull" — IX "Machinery" of these Rules as well as 3.1.3.3 of Part III "Signal Means" of the Rules for the Equipment of Sea-Going Ships, one of the following ice class marks: Icebreaker6, Icebreaker7, Icebreaker8, Icebreaker9 and descriptive notation Icebreaker are added to the character of classification.

Icebreakers of the above ice classes have the following tentative service characteristics:
- Icebreaker6 — intended for ice breaking operations in harbour and roadstead water areas as well as in freezing seas where the ice is up to 1,5 m thick. Continuous motion capability in unbroken ice up to 1 m thick;
- Icebreaker7 — intended for ice breaking operations in the arctic seas on coastal routes during winter/spring navigation in ice up to 2,0 m thick and summer/autumn navigation in ice up to 2,5 m thick; in non-arctic freezing seas and mouths of rivers flowing into arctic seas in ice up to 2,0 m thick. Continuous motion capability in unbroken ice up to 1,5 m thick. The total shaft power not less than 11 MW;
- Icebreaker8 — intended for ice breaking operations in the arctic seas on coastal routes during winter/spring navigation in ice up to 3,0 m thick and summer/autumn navigation without restrictions. Continuous motion capability in unbroken ice up to 2,0 m thick. The total shaft power not less than 22 MW;
- Icebreaker9 — intended for ice breaking operations on coastal routes in arctic seas during winter/spring navigation in ice up to 4,0 m thick and summer/autumn navigation without restrictions. Continuous motion capability in unbroken ice over 2,0 m thick. The total shaft power not less than 48 MW.
2.2.3.3 Register ice classes.
2.2.3.3.1 If a self-propelled ice class ship complies with the relevant requirements of these Rules, one of the following ice class marks is added to its character of classification: Ice1, Ice2, Ice3, Arc4, Arc5, Arc6, Arc7, Arc8, Arc9, and compliance of hull (hull) and machinery installation (machinery) with the requirements of these Rules in full scope is indicated in brackets, e.g. KM Ice1 (hull), KM Arc4 (hull; machinery).

In case the ship hull corresponds to one ice class and the machinery installation corresponds to another ice class, the applicable ice classes shall be specified separately, e.g. KM Ice1 Arc4 (hull; machinery). In such case, a ship with mark (hull) in the class notation shall comply with the applicable requirements of Part III "Equipment, Arrangements and Outfit" of these Rules and 3.1.3.3 of Part III "Illumination" of the Rules for the Equipment of Sea-Going Ships, in addition to the requirements of Part II "Hull". A ship with mark (machinery) in the class notation shall comply with the applicable requirements of Part VI "Fire Protection" of Part VII "Machinery Installations" of Part VIII "Systems and Piping" and Part IX "Machinery" of these Rules.

Where a non-self-propelled ship complies with the requirements for ice class, a mark (hull) shall be added to its character of classification.

2.2.3.3.2 Register ice classes and their descriptions are given in Table 2.2.3.3.2.

</table>

Notes:
1. The possibility of operation of a vessel in a particular area is determined depending on the season, current weather conditions, actual ice conditions, presence of assistance for navigation in ice and this is the responsibility of the shipowner.
2. For ships having distinguishing mark DAS in class symbol ice conditions are assigned on the basis of the descriptions of ice classes.

2.2.3.3.3 For tugs, depending on their compliance with the requirements of these Rules for ice class, one of the following ice class marks is added to the character of classification: Ice2, Ice3, Arc4, Arc5, Arc6 taking into account the provisions of 2.2.3.3.1.

Determination of possible periods and areas of navigation as well as regimes of navigation with icebreaker escort is within the shipowner's.
2.2.3.3.4 If an ice class ship which is not an icebreaker in accordance with 2.2.3.1.1, but occasionally is involved in icebreaking operations and complies with the relevant requirements of these Rules, one of the following ice class marks: Icebreaker6 or Icebreaker7 with descriptive notation Icebreaking vessel may be added to the character of classification.

2.2.3.3.5 Double acting ships (DAS) are ice navigation ships fitted with active means of the ship's steering (refer to 1.2 Part VII "Machinery Installations") and designed for both bow-first operation and stern-first operation in ice condition.

If double acting ships comply at least with the requirements of Section 19, Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark DAS (ice class mark) may be added to the character of classification, where the RS ice class is indicated in brackets according to 2.2.3.3.1 or 2.2.3.3.4 in case of stern-first operation.

When the RS ice class in case of stern-first operation differs from that in case of bow-first operation, the appropriate limitation is introduced to the RS ice class assigned according to 2.2.3.3.1 or 2.2.3.3.4, for example: Arc4 (hull at d ≤ 11 m; ahead) DAS (Arc6 hull at d ≤ 11 m) Arc6 (machinery).

2.2.3.3.6 If berth-connected ships operated when lying at anchor at a water area distanced from the shore as well as ships operated in accordance with their intended purpose allowing for periodical drifting in ice-covered waters comply with the requirements of these Rules, one of the following ice class marks I1(Hull), I2(Hull) or I3(Hull) may be added to the character of classification of such ships:

I1(Hull) — applicable to ships operating in the East Siberian Sea, the Chukchi Sea; I2(Hull) — applicable to ships operating in the Barents Sea, the Sea of Okhotsk, the Kara Sea, the Laptev Sea, the Bering Sea; I3(Hull) — applicable to ships operating the Baltic Sea, the Caspian Sea, the Sea of Azov.

2.2.4 Subdivision distinguishing marks.

Ships complying with the applicable requirements of Part V "Subdivision" and fully complying with the requirements of Section 3 of the above Part in the case of flooding of any one compartment or any two adjacent compartments over complete length of the ship in the case of design side damage specified in 3.2 of Part V "Subdivision" are assigned subdivision distinguishing mark I or II added to the character of classification, respectively.

2.2.5 Distinguishing marks for restricted areas of navigation.

2.2.5.1 Ships complying with these Rules requirements provided for ships operating only in restricted areas of navigation are assigned one of the following distinguishing marks: R1, R2, R2-RSN, R2-RSN(4,5), R3-RSN or R3 added to the character of classification to clarify restrictions of the ship navigation as follows:

.1 R1 — navigation in sea areas at seas with a wave height of 8,5 m with 3 % probability of exceeding level and with the ships proceeding not more than 200 miles away from the place of refuge and with an allowable distance between the places of refuge not more than 400 miles;

.2 R2 — navigation in sea areas at seas with a wave height of 7,0 m with 3 % probability of exceeding level with ships proceeding not more than 100 miles away from the place of refuge and with an allowable distance between the places of refuge not more than 200 miles;

.3 R2-RSN — river-sea navigation at seas with a wave height of 6,0 m with 3 % probability of exceeding level with ships proceeding from the place of refuge:

in open seas up to 50 miles and with an allowable distance between the places of refuge not more than 100 miles;

in enclosed seas up to 100 miles and with an allowable distance between the places of refuge not more than 200 miles;

.4 R2-RSN(4,5) — river-sea navigation at seas with a wave height of 4,5 m with 3 % probability with ships proceeding from the place of refuge:

in open seas up to 50 miles and with an allowable distance between the places of refuge not more than 100 miles;

in enclosed seas up to 100 miles and with an allowable distance between the places of refuge not more than 200 miles;
.5 **R3-RSN** — river-sea navigation at seas with a wave height of 3.5 m with 3% probability of exceeding level with due regard for particular restrictions on the area and conditions of navigation resulting from the wind and wave conditions of the basins with determination of a maximum allowable distance from the place of refuge which in no case shall be more than 50 miles;

.6 **R3** — harbor, roadstead and coastal navigation in a 20-mile coastal zone with a wave height up to 2.5 m with 3% probability of exceeding level with ships proceeding from the place of refuge in accordance with Table 2.2.5.1.6 or with restrictions imposed on the distance from the places of refuge and the height of the wave with 3% probability based on the justifications submitted to the Register taking into account the wind and wave conditions in specific restricted sea areas.

Particular restrictions for operation of floating cranes (cargo-handling operations and navigation with carriage of cargoes on deck and/or in the hold) shall be imposed by the Register in each particular case.

¹ Permissible distances from the place of refuge assigned subject to confirmation of the stability of a ship of restricted area of navigation R3 under weather criterion in accordance with the requirements of Part IV "Stability" for river-sea navigation ships R3-RSN are given in brackets.

**2.2.5.2** The restrictions provided for by **2.2.5.1** define the allowable conditions of ship's navigation resulting from ship's stability and strength which are indicated in the Seaworthiness Certificate and in the Classification Certificate (if issued on behalf of the Flag State MA).

**2.2.5.3** Particular restrictions on the area and conditions of navigation for ships of river-sea navigation **R3-RSN** are determined as the geographical place names of basins or their parts with the indication, where necessary, of the geographical boundary of the navigation area within the basin, the restrictions on proceeding from the place of refuge and the restrictions of ship navigation by calendar periods, or an indication of voyage between the terminal ports. In this case, the restrictions with due regard to the wind and wave conditions of the basins shall be determined by using the data of **Table 2.2.5.3** or the data from the submitted to the Register justifications of possibility of ship's navigation in the certain area or passage, made in accordance with the procedure approved by the Register.

</tbody>
</table>

1. In the years of low and medium ice coverage to be determined by the position of Ayon ice massif.
2. For ships having the Register-approved area of navigation to the south of the port of Turkmenshoshi (the port of Bekdash) within 20-mile coastal area along the eastern coast up to ports of Iran, from Cheleken Peninsula (at 39°28’N, 52°40’E) up to the southern extremity of Ogurchinsky Island (at 38°40’N, 53°00’E), the 20-mile coastal area shall be counted from the coast of Ogurchinsky Island.

2.2.5.4 Sea coastal ships flying the flag of the Russian Federation not engaged on international voyages and complying with the requirements of Section 26 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" are assigned the distinguishing mark RN(Sci) or RN(Scii) added to the character of classification to clarify restrictions of the ship navigation as follows:

.1 RN(Sci) — harbor, roadstead and coastal navigation, including inland waterways, with a wave height up to 3 m with 3 % probability of exceeding level with due regard for particular restrictions on the area and conditions of navigation resulting from the wind and wave conditions of the basins in accordance with Table 2.2.5.4-1, or with restrictions imposed on the distance from the place of refuge and the height of the wave with 3 % probability of exceeding level based on the justifications submitted to the Register taking into account the wind and wave conditions in specific restricted sea areas (where RN — restricted navigation, SC — sea coastal);
.2 **RN(SCII)** — harbor, roadstead and coastal navigation, including inland waterways, with a wave height up to 2 m with 3% probability of exceeding level with due regard to particular restrictions on the area and conditions of navigation resulting from the wind and wave conditions of the basins in accordance with Table 2.2.5.4-2, or with restrictions imposed on the distance from the place of refuge and the height of the wave with 3% probability of exceeding level based on the justifications submitted to the Register taking into account the wind and wave conditions in specific restricted sea areas (where RN — restricted navigation, SC — sea coastal).

Particular restrictions on the area and conditions of navigation for sea coastal ships **RN(SCI)** and **RN(SCII)** are determined as the geographical place names of basins or their parts with the indication, where necessary, of the geographical boundary of the navigation area within the basin, the restrictions imposed on the distance from the place of refuge and the restrictions on ship navigation by calendar periods, or an indication of voyage between the terminal ports. In this case, the restrictions with due regard to the wind and wave conditions of the basins shall be determined by using the data of Tables 2.2.5.4-1 and 2.2.5.4-2 or the data from the submitted to the Register justifications of possibility of sea coastal ship's navigation in the certain area or passage, made in accordance with the procedure approved by the Register.

The allowable conditions of sea coastal ship's navigation resulting from ship's stability and strength are indicated in the Classification Certificate. Particular restrictions on the area and conditions of navigation of such ships with due regard to the wind and wave conditions of the basins specified in Tables 2.2.5.4-1 and 2.2.5.4-2 or the data from the justifications approved by the Register are indicated in section "Permanent restrictions" of the Classification Certificate or in the Annex to the Classification Certificate.

**Note.** \( h_{3\%} \) — wave height of 3\% probability.

1. The self-propelled displacement passenger ships designed for navigation on inland waterways and accepted to the RS class with the area of navigation extended to sea coastal areas, are assigned the areas of navigation in Taganrog Bay of the Sea of Azov at the lines Azov — Taganrog — Yeysk and in the White Sea.

2. Except for self-propelled displacement passenger ships designed navigation on inland waterways and accepted to the RS class with the area of navigation extended to sea coastal areas.

## 2.2.6 Distinguishing automation marks.

Ships and offshore installations fitted with automation equipment complying with the requirements of Part XV "Automation" are assigned one of the following distinguishing marks added to the character of classification, namely:

1. **AUT1** — where the automation extent is sufficient for the machinery installation operation with unattended machinery spaces and the main machinery control room;
2. **AUT2** — where the automation extent is sufficient for the machinery installation operation by one operator at the main machinery control room with unattended machinery spaces;
3. **AUT3** — where the automation extent is sufficient for the machinery installation operation of a ship with the main machinery power output not more than 2250 kW with unattended machinery spaces and the main machinery control room;
4. **AUT1-C, AUT2-C or AUT3-C** — where automation is based on computers or programmable logic controllers meeting the requirements of Section 7 of Part XV "Automation";
5. **AUT1-ICS, AUT2-ICS or AUT3-ICS** — where automation is made with the use of a computerized integrated monitoring and control system meeting the requirements of Section 7 of Part XV "Automation".

## 2.2.7 Distinguishing mark for a ship equipped to enable one man bridge operation under normal conditions.

If a ship is equipped in compliance with the requirements of Section 28 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark **OMBO** may be added to the character of classification.
2.2.8 Distinguishing mark for a ship carrying equipment for fire fighting aboard other ships.

If a ship carries supplementary systems, equipment and outfit for fire fighting aboard other ships, offshore drilling units, floating and shore facilities and if the ship is in full compliance with the relevant requirements of these Rules in respect to those appliances, the distinguishing mark FF1WS, FF1, FF2WS, FF2, FF3WS or FF3 is added to the character of classification proceeding from the degree of the ship equipment with these appliances.

The degree of the ship equipment for fire fighting in other structures is determined on the basis of the list of fire fighting equipment and systems prescribed by 6.6 of Part VI "Fire Protection".

2.2.9 Distinguishing mark for ships fitted with a dynamic positioning system.

If a ship is fitted with a dynamic positioning system complying with the requirements of Section 8 of Part XV "Automation", one of the following distinguishing marks: DYNPOS-1, DYNPOS-2 or DYNPOS-3 is added to the ship's character of classification, depending on the redundancy of the dynamic positioning system.

2.2.10 Distinguishing mark of availability of position-keeping/position mooring systems.

Ships and offshore installations equipped with the position-keeping system/automated control system for power equipment of position mooring or thruster assisted position mooring systems, are assigned one of the following distinguishing marks added to the character of classification:

1. POSIMOOR-FIX — if the position-keeping system meets the requirements of 21.1.1.1, Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships";

2. POSIMOOR — if the position mooring system meets the requirements of 21.1.1.2, Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships";

3. POSIMOOR-TA — if the position mooring system meets the requirements of 21.1.1.3, Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".

2.2.11 Distinguishing mark for a ship intended for carriage of refrigerated cargo.

Ships intended for carriage or storage of refrigerated cargo or catch in ship's cargo spaces and/or in thermal containers and using non-classed refrigerating plant for maintaining the required temperature, complying with the relevant requirements of Part XII "Refrigerating Plants", are assigned the distinguishing mark (REF) added to the character of classification.

2.2.12 Distinguishing mark for ships fitted with the main electric propulsion plant.

If a ship is fitted with the main electric propulsion plant complying with the requirements of Section 17 of Part XI "Electrical Equipment", the distinguishing mark EPP is added to the character of classification.

2.2.13 Distinguishing mark for ships fitted with equipment for icing protection.

If a ship is fitted with equipment providing effective icing protection in compliance with the requirements of Section 4 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark ANTI-ICE is added to the character of classification.

2.2.14 Distinguishing mark for a ship intended for carriage of packaged irradiated nuclear fuel, plutonium and high-level radioactive wastes (INF cargo).

Ships intended for carriage of packaged irradiated nuclear fuel, plutonium and high-level radioactive wastes, which comply with the requirements of 7.3 of Part VI "Fire Protection", are assigned one of the following distinguishing marks added to the character of classification:

INF1 for Class INF1 ships;
INF2 for Class INF2 ships;  
INF3 for Class INF3 ships.

2.2.15 Distinguishing mark for ships fitted with a loading instrument/onboard software for stability calculations.

2.2.15.1 If a ship is equipped with a loading instrument complying with the requirements of 1.4.9.4 of Part II "Hull" of these Rules and 12.3 of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships, the distinguishing mark LI is added to the character of classification.

2.2.15.2 If a ship is provided with onboard software for stability calculations complying with the requirements of 1.4.12 of Part IV "Stability" of these Rules and 12.2 of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships, the distinguishing mark SI is added to the character of classification.

2.2.16 Distinguishing mark for ships fitted with a cargo vapour discharge system.

If a ship is fitted with a cargo vapour discharge system complying with the requirements of 9.9 of Part VIII "Systems and Piping", the distinguishing mark VCS is added to the character of classification.

2.2.17 Distinguishing mark for ships fitted with an inert gas system.

If a ship is fitted with an inert gas system complying with the requirements of 9.16 of Part VIII "Systems and Piping", one of the following distinguishing marks is added to the character of classification:

1. IGS-IG if a system uses an oil-burning inert gas generator as the inert gas source and the requirements of 9.16.9 of Part VIII "Systems and Piping" are complied with;

2. IGS-NG if a system uses a nitrogen generator as the inert gas source and the requirements of 9.16.12 of Part VIII "Systems and Piping" are complied with;

3. IGS-Pad if an inert gas system is only intended for forming an insulating pad in cargo tanks and the requirements of 9.16.11 of Part VIII "Systems and Piping" are complied with. This distinguishing mark may be used where systems with inert gas supplied from cylinders are installed as well as for systems using inert gas and nitrogen generators whose capacity is insufficient for assigning the distinguishing marks IGS-IG or IGS-NG.

2.2.18 Distinguishing mark for ships fitted with a crude oil washing system.

If a ship is fitted with a crude oil washing system complying with the requirements of 9.12 of Part VIII "Systems and Piping", the distinguishing mark COW is added to the character of classification.

2.2.19 Distinguishing mark for ships fitted with a centralized cargo control system.

If a ship is fitted with a cargo control room complying with the requirements of 3.2.11 of Part VII "Machinery Installations", the distinguishing mark CCO is added to the character of classification.

2.2.20 Distinguishing marks for ships of high ecological safety.

Ships complying with the requirements of Section 3 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" are assigned with one of the following distinguishing marks added to the character of classification:

1. ECO — if a ship meets the requirements for controlling and limiting operational emissions and discharges, as well as requirements for prevention of environmental pollution in case of emergency, as specified in 3.5 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships";

2. ECO-S — if a ship meets more stringent requirements than those for assignment of the distinguishing mark ECO in the class notation, as specified in 3.6 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".
2.2.21 Distinguishing mark for a ship complying with ballast water management requirements.

If a ship performs ballast water management through ballast water exchange at sea and, as appropriate, carries the Guidelines for Safe Ballast Water Exchange at Sea, which complies with the requirements of 1.4.13 of Part IV “Stability” of these Rules and is a part of the approved Ballast Water Management Plan, which complies with the requirements of regulation B-1 of the International Convention for the Control and Management of Ships’ Ballast Water and Sediments (BWM Convention), 2004, and the ship ballast system complies with the requirements of 8.7 of Part VIII “Systems and Piping” of these Rules, one of the following distinguishing marks is added to the character of classification: BWM (E-S), BWM (E-F), BWM (E-D), BWM (E-SF), BWM (E-SD), BWM (E-FD) or BWM (E-SFD). BWM means that the ship performs ballast water management; E means that ballast water management is performed through ballast water exchange at sea; S means that sequential method is used; F means that flow-through method is used; D means that dilution method is used; SF, SD, FD and SFD mean that combined ballast water exchange method is used being a combination of the above methods.

Note. Above mentioned distinguishing marks shall not be applied to ships the keels of which are laid or which are at a similar stage of construction on or after 8 September 2017 in accordance with the revised regulation B-3 of the BWM Convention, and may be applied to ships the keels of which are laid or which are at a similar stage of construction on or after 8 September 2017, and shall remain in the class notation of these ships until the date when the ship complies with the regulation D-2 of the BWM Convention but not later than 8 September 2024.

2.2.22 Distinguishing mark for ships fitted with ballast water treatment system.

If a ship performs ballast water management through the ballast water management system (BWMS) having the Type Approval Certificate of Ballast Water Management System issued in accordance with IMO resolution MEPC.174(58), MEPC.279(70) or Code for Approval of Ballast Water Management Systems (BWMS Code, IMO resolution MEPC.300(72)), as applicable, and carries the approved operations, maintenance and safety manual for the BWMS specific to the ship, a distinguishing mark BWM (T) is added to the character of classification. BWM means that the ship performs ballast water management in accordance with the approved Ballast Water Management Plan, which complies with the requirements of regulation B-1 of the BWM Convention, and T means that ballast water management through treatment of the ballast water within the BWMS is carried out in compliance with the ballast water performance standard in regulation D-2 of the BWM Convention.

2.2.23 Distinguishing marks for a ship fitted with a diving system permanently installed on the ship.

If ships are fitted with diving system installed permanently on ships that complies with the relevant requirements of the Rules for the Classification and Construction of Manned Submersibles and Ship’s Diving Systems, one of the following distinguishing marks may be added to the character of classification:

1. SDS < 12 for ships fitted with a diving system designed for diving operations at depths less than 12 m;
2. SDS < 60 for ships fitted with a diving system designed for diving operations at depths less than 60 m;
3. SDS ≥ 60 for ships fitted with a diving system designed for diving operations at depths of 60 m and over.

2.2.24 Distinguishing mark for ships fitted with manned submersible.

If ships are fitted with manned submersible complying with the relevant requirements of the Rules for the Classification and Construction of Manned Submersibles and Ship’s Diving Systems, the distinguishing mark MS may be added to the character of classification.
2.2.25 Distinguishing mark for a ship to carry out cargo operations at offshore terminals.

Oil tankers to carry out cargo operations at offshore terminals in compliance with the requirements of Section 5 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" are assigned one of the following distinguishing marks added to the character of classification:

- **BLS-SPM** — if a ship is fitted with the bow loading system and fully complies with the requirements for equipment of oil tankers to carry out cargo operations at offshore terminals; 
- **BLS** — if a ship is fitted with the bow loading system and complies with the requirements for equipment of oil tankers to carry out cargo operations at offshore terminals, except for 5.6.2 — 5.6.9 and 5.6.12 — 5.6.14 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships"; 
- **SPM** — if a ship is not fitted with the bow loading system, though complies with the requirements of 5.6.2 — 5.6.9 and 5.6.12 — 5.6.14 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".

This distinguishing mark may also be added to the character of classification of ships carrying liquefied gases in bulk.

2.2.26 Distinguishing mark for a ship fitted with helicopter facilities.

If ships are fitted with helicopter facilities in compliance with the requirements of Section 6 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", one of the following distinguishing marks is added to the character of classification:

- **HELIDECK** — if a ship is fitted with a helideck and complies with the requirements of 6.2, 6.3, 6.4.1, 6.6 and 6.7 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships"; 
- **HELIDECK-F** — if a ship is fitted with helicopter refuelling facilities and, in addition to 2.2.26.1 of this Part, complies with the requirements of 6.4.2 (as far as applicable), 6.5.1 and 6.5.2 (as far as applicable) of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships"; 
- **HELIDECK-H** — if a ship is fitted with hangar facilities and fully complies with the requirements of Section 6 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".

2.2.27 Distinguishing mark for a ship equipped to ensure long-term operation at low temperatures.

If ships are equipped to ensure long-term operation at low temperatures in compliance with the requirements of Section 7 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the character of classification is added the distinguishing mark **WINTERIZATION(DAT)**, at the shipowner's discretion the distinguishing mark **WINTERIZATION** is added to the character of classification, where design ambient temperature is indicated in brackets, in Celsius degrees, e.g. **WINTERIZATION(–40)**.

2.2.28 Distinguishing mark for propulsion plant redundancy.

Where provision is made for the redundancy of propulsion plant components complying with the requirements of Section 8 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of the Ship", one of the following distinguishing marks is added to the character of classification: **RP-1, RP-1A, RP-1AS, RP-2 or RP-2S**, depending on the redundancy arrangement.

2.2.29 Distinguishing mark for a ship equipped to use gas as fuel.

Ships equipped for using gas as fuel in compliance with the requirements of Section 9 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" of these Rules, as well as gas carriers carrying liquefied methane, using cargo as fuel and complying with the requirements of the International Code for the Construction and Equipment of Ships Carrying Liquefied Gases in Bulk (IGC Code) and the Rules for the Classification and Construction of Ships Carrying Liquefied Gases in Bulk, are assigned the distinguishing mark **GFS** (gas fuelled ships) added to the character of classification.
2.2.30 Distinguishing mark for a planned maintenance scheme for machinery applied on board the ship.
If a planned maintenance scheme for machinery (PMS) is applied on board the ship in compliance with the requirements of 2.7 of Part II "Survey Procedure and Scope" of the Rules for the Classification Surveys of Ships in Service, the distinguishing mark PMS may be added to the character of classification.

2.2.31 Distinguishing marks for condition monitoring system and condition based maintenance system applied on board the ship.
If a ship is fitted with an approved condition monitoring system (CM system) complying with the requirements of Section 10 of Part VII "Machinery Installations" of these Rules and requirements of 2.8.1.2 and 2.8.2 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service, the distinguishing mark CM (Condition Monitoring) may be added to the character of classification.

If a ship is fitted with an approved condition based maintenance system (CBM system) complying with the requirements of 2.8.1.3 and 2.8.2 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service, the distinguishing mark CBM (Condition Based Maintenance) may be added to the character of classification.

2.2.32 Distinguishing mark for ships fitted for possible carriage of the international standard containers.
If a ship without a descriptive notation Container ship in the class notation is fitted for carriage of cargo in international standard containers on deck and/or in appropriate holds, the distinguishing mark CONT is added to the character of classification and the container transportation area is specified in brackets (deck) (cargo hold(s) No.).

2.2.33 Distinguishing mark for ships fit for carriage of dangerous goods.
If a ship complies with the requirements of Section 7 of Part VI "Fire Protection" of these Rules, was duly surveyed according to 2.1.5 of Part I "Survey of Ships in Compliance with International Conventions, Codes, Resolutions and Rules for the Equipment of Sea-Going Ships" of the Guidelines on Technical Supervision of Ships in Service, and is recognized fit for carriage of dangerous goods, the distinguishing mark DG is added to the character of classification with the following specified in brackets depending on the type of dangerous goods: (bulk) — in bulk, (pack) — packaged.

If a ship is recognized fit for carriage of dangerous goods in bulk and packaged form, the distinguishing marks for carriage of dangerous goods are allowed to be combined DG (bulk, pack).

2.2.34 Distinguishing mark for implementation of modified survey of the shafting.
If a modified survey of the shafting in compliance with the requirements of 2.11.2.7 of Part II "Survey Schedule and Scope" of the Rules for the Classification Surveys of Ships in Service is accepted for a ship, the distinguishing mark TMS (Tailshaft Modified Survey) is added to the character of classification.

2.2.35 Distinguishing mark for ships prepared for in-water survey.
For a ship built according to Section 12 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark IWS is added to the character of classification.

2.2.36 Distinguishing mark for alternative method of reducing SOx emissions.
If on board a ship, as an alternative, the exhaust gas (SOx) cleaning system of the fuel oil combustion unit approved by RS is fitted, considering IMO resolution MEPC.259(68), the distinguishing mark SOx Cleaning shall be added to the character of classification.

2.2.37 Distinguishing mark for marine diesel engine to comply with Tier III limit according to Regulation 13 of Annex VI to MARPOL.
If nitrogen oxides emissions from marine diesel engines comply with Tier III limit and Regulation 13 of Annex VI to MARPOL, which is endorsed by the Engine International Air Pollution Prevention Certificate (EIAPP Certificate), the distinguishing mark DE-Tier III is added to the character of classification.
2.2.38 Distinguishing mark for ships prepared for conversion for the use of gas fuel.

If a ship is prepared for conversion for the use of gas fuel and complies with the requirements of Section 14 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", at the shipowner's discretion, the distinguishing mark GRS (Gas Ready Ship) or one of the following distinguishing marks shall be added to the character of classification: GRS-D, GRS-H, GRS-T, GRS-P, GRS-E or, for example, GRS-D-H-T, depending on the ship's readiness for conversion to use gas fuel according to 14.2.2. of the above stated part.

2.2.39 Distinguishing mark for ships which are periodically grounded in operation.

If ships may lie aground in safety with partial or full hull baring in places fit for grounding the ships, and comply with the requirements of Section 15 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", at the shipowner's discretion, one of the following distinguishing marks may be added to the character of classification of a ship:

.1 NAABSA1 — partial or full ship underwater hull baring is permitted on plane homogeneous sand-and-shingle or sand-and-mud seabeds with no motion in calm water as harbours or sheltered areas;

.2 NAABSA2 — in addition to NAABSA1 distinguishing mark requirements specified above, motion and ship bow impact contact with seabed at defined wave parameters are permitted;

.3 NAABSA3 — in addition to NAABSA2 distinguishing mark requirements specified above, hull baring of moored ship is permitted at specified distance from seashore line in rolling conditions with impact contact against the seabed in any point of the hull bottom.

2.2.40 Distinguishing mark for ships fitted with boiler plant monitoring system.

If ships are fitted with boiler plant monitoring system that allows to carry out internal surveys of steam boilers without participation of the RS surveyor, and that complies with the requirements of Section 16 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", at the shipowner's discretion, the distinguishing mark BMS (Boiler Monitoring System) may be added to the character of classification.

2.2.41 Distinguishing mark for ships fitted with hull strength and/or stability monitoring system.

If ships are fitted with hull strength and/or stability monitoring system complying with the requirements of Section 17 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", at the shipowner's discretion, the distinguishing mark HMS(…) may be added to the character of classification. The marks added in brackets (STR, STAB or STR-STAB) specify completeness of the system. Where the monitoring system is fitted with additional functions, the distinguishing mark shall be specified as HMS(system completeness)+<system function> with system function (BS, C, DD, DM, N, RPM, SI, SW, TS, ThS, TVS or W) indicated after the "+" sign. If several functions are provided, the system function marks may be combined and shall be specified without separation by commas.

2.2.42 Distinguishing marks for ships complying with the requirements for indoor hygiene and sanitary conditions.

2.2.42.1 If ships comply with the indoor climate requirements specified in 18.1 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", at the shipowner's discretion, the distinguishing mark COMF(C) may be added to the character of classification.

2.2.42.2 If ships comply with the requirements for noise level in ship’s spaces specified in 18.2.1.1 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark COMF(N – 1 or 2, or 3) may be added to the character of classification, where grades 1, 2, 3 indicate the noise comfort level in ship's spaces (with grade 1 corresponding to the most comfortable level).
If ships of 1600 gross tonnage and upwards engaged on international voyages comply with the requirements for noise level in ship’s spaces specified in 18.2.1.3 of Part XVII “Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships”, the distinguishing mark COMF(N – S) shall be mandatorily added to the character of classification, where "S" means compliance of the noise comfort level with the requirements of SOLAS-74.

2.2.42.3 If ships comply with the requirements for sanitary vibration level in ship’s spaces specified in 18.3 of Part XVII “Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships”, the distinguishing mark COMF(V – 1 or 2, or 3) may be added to the character of classification, where grades 1, 2, 3 indicate permissible sanitary vibration comfort level in ship’s spaces (with grade 1 corresponding to the most comfortable level).

2.2.42.4 If a ship simultaneously complies with the requirements of several Chapters of Section 18 of Part XVII “Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships”, distinguishing marks for ships complying with indoor hygiene and sanitary conditions may be combined, e.g.: COMF(C), COMF(C, N – 1), COMF(N – 1, V – 1), etc.

2.2.43 Distinguishing mark for ships fitted with a system of prompt access to computerized shore-based emergency response services (ERS) on damage stability and residual structural strength calculations.

If a ship is fitted with a system of prompt access to computerized shore-based emergency response services (ERS) on damage stability and residual structural strength calculations, the distinguishing mark ERS may be added to the character of classification.

A system of prompt access to computerized shore-based emergency response service shall comply with the requirements of 12.2.4 of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships.

2.2.44 Distinguishing mark confirming fatigue life of a ship.

Where design remaining life of a ship (fatigue life) exceeds 25 years, the distinguishing mark FTL (years) may be added to the character of classification, where design remaining life of a ship within the range of 25 — 40 years (at 5-year intervals) is indicated in brackets.

When performing verification by direct calculation with application of spectral method, the distinguishing mark Spectral North Atlantic is added after the distinguishing mark FTL (years).

The method for fatigue assessment during the design stage is given in the Guidelines on Fatigue Assessment of Ships.

2.2.45 Distinguishing mark for ships fitted with composite (hybrid) propulsive systems.

If a ship is fitted with composite (hybrid) propulsive systems complying with the requirements of Section 24 of Part XI "Electrical Equipment", the distinguishing mark CPS is added to the character of classification.

2.2.46 Distinguishing mark for ships fitted with steerable propellers (azimuth thrusters) being a part of the propulsion plant.

If the propulsion plant includes a steerable propeller (azimuth thruster) with a podded drive, the distinguishing mark A-Thruster(E) is added to the character of classification.

If the propulsion plant includes a steerable propeller (azimuth thruster) with mechanical transmission of power to the propeller, the distinguishing mark A-Thruster(M) is added to the character of classification.

2.2.47 Distinguishing mark for ship’s fitness for long-term operation without dry-docking.

UWILD (underwater inspection in lieu of dry-docking) — a distinguishing mark assigned to a berth-connected ship designed in such a way as to provide the possibility to replace surveys of the outside of the ship’s bottom (bottom surveys) in dry dock with underwater inspection (in-water surveys using underwater television). For assignment of distinguishing mark UWILD,
the requirements specified in Section 20 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", except for provisions of 20.3.1.3.6, shall be complied with.

Where, for a berth-connected ship with distinguishing mark UWILD, a possibility of performing any types of maintenance and surveys is provided without interrupting the ship's normal operation for the intended purpose, in the class notation an entry — S (the possibility provided by the design for the ship to remain in operation during the maintenance of bottom and side valves, and for systems and mechanisms using temporarily isolated bottom and side valves, to remain operational using the redundancy of isolated components of sea water systems) is added after the distinguishing mark UWILD. For the assignment of distinguishing mark UWILD, the requirements specified in Section 20 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", including 20.3.1.3.6, shall be complied with.

2.2.48 Distinguishing mark for Enhanced Survey Programme.

The distinguishing mark (ESP) means the necessity to survey certain ship types based on the Enhanced Survey Programme in accordance with the International Code on the Enhance Programme of Inspections during Surveys of Bulk Carriers and Oil Tankers (if applicable) and Sections 1 — 6 of Part III "Additional Surveys of Ships Depending on Their Purpose and Hull Material" of the Rules for the Classification Surveys of Ships in Service. Such ships include bulk carriers, oil tankers, combination carriers, ore carriers, chemical tankers and self-unloading bulk carriers. To ensure a uniform and correct interpretation, the definitions of types of ships subject to Enhanced Survey Programme (ESP) are given in 2.2 of Part I "General Provisions" of the Rules for the Classification Surveys of Ships in Service.

2.2.49 Distinguishing mark specifying the necessity for monitoring of critical structural areas.

CON-M is a distinguishing mark which is added to the character of classification of the ship constructed in accordance with the Common Structural Rules (hereinafter referred to as "the CSR ship") complying with the requirements of Section 22 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships".

2.2.50 Distinguishing mark for a ship equipped to use methanol and ethanol as fuel.

Ships equipped to use methanol and ethanol as fuel in compliance with the requirements of Section 23 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark LFLFS (Me) or LFLFS (Et) (Low Flashpoint Liquid Fuelled Ship (Methanol) or (Ethanol)) may be added to the character of classification.

2.2.51 Distinguishing mark for a ship complying with the requirements for stability under icing.

2.2.51.1 Ships whose stability has been checked at full ice weight allowance in compliance with the requirements of 2.4.6 of Part IV "Stability" are assigned the distinguishing mark IcingSTAB(full) added to the character of classification.

2.2.51.2 Ships whose stability has been checked at ice weight allowance reduced by half in compliance with the requirements of 2.4.7 of Part IV "Stability" are assigned the distinguishing mark IcingSTAB(half) added to the character of classification.

2.2.52 Distinguishing marks confirming application of protective coatings or utilization of alternative means of corrosion protection in ship's spaces.

COAT (PSPC) is a distinguishing mark added to the character of classification of ships of all types of 500 gross tonnage and upwards as well as bulk carriers of 150 m in length and above covered by regulation II-2/3-2 of SOLAS 74 as amended by IMO resolution MSC.216(82), and on board which the protective coating is applied in accordance with IMO resolution MSC.215(82).

COAT (PSPC-COT) is a distinguishing mark added to the character of classification of crude oil tankers of 5000 t deadweight and above covered by regulation II-1/3-11 of SOLAS 74 as amended by IMO resolution MSC.291(87), and on board which the protective coating is applied in accordance with IMO resolution MSC.288(87).
CORRES is a distinguishing mark added to the character of classification of crude oil tankers of 5000 t deadweight and above covered by regulation II-1/3-11 of SOLAS 74 as amended by IMO resolution MSC.291(87), and on board which the alternative means of corrosion protection or corrosion resistant materials are utilized to maintain the required structural integrity for 25 years in accordance with IMO resolution MSC.289(87).

COAT is a distinguishing mark added to the character of classification of ships covered by regulation II-2/3-2 of SOLAS 74 as amended by IMO resolution MSC.47(66), and on board which the protective coating is applied in accordance with IMO resolution A.798(19).

2.2.53 Distinguishing mark confirming application of ice-resistant coating for protection of shell plating of the ship’s hull.

ICE-COAT is a distinguishing mark that may be added to the character of classification of icebreakers and ice class ships when protection of shell plating with ice-resistant coating is provided in case of reduction of average annual diminution of shell plating as a result of corrosion wear and abrasion (25 % or 50 %). In other cases (when protection of shell plating with ice-resistant coating is provided without reduction of average annual diminution of shell plating as a result of corrosion wear and abrasion), may be added at the shipowner's discretion.

2.2.54 Distinguishing mark for tankers and combination carriers equipped with an effective cargo tank washing system.

If tankers with descriptive notation Chemical tanker and/or Oil tanker and combination carriers (Oil/bulk/ore carrier or Oil/bulk carrier or Oil/ore carrier) are equipped with an effective cargo tank washing system in compliance with the requirements of Section 27 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", the distinguishing mark ETW (Effective Tank Washing) may be added to the character of classification.
2.3 DESCRIPTIVE NOTATIONS IN THE CLASS NOTATION OF A SHIP

Ships complying with a definite scope of requirements of the RS rules taking account of their structural particulars and service conditions are assigned the appropriate descriptive notation (designation of ship type and purpose) added to the character of classification of a ship.

The current RS rules cover certain requirements the fulfilment of which makes possible introducing of the descriptive notations specified in 2.5 in the class notation.
2.4 ADDITIONAL ENTRIES IN THE CLASSIFICATION CERTIFICATE

2.4.1 When complying with definite requirements of the RS rules stipulated by the structural features or operational characteristics of the ship the fulfilment of which is not reflected by distinguishing marks and descriptive notation in the class notation, the confirmation of compliance of the ship with such requirements is certified by the entry in Section "Other characteristics" of the Classification Certificate stating, for example, that the ship is equipped for occasional loading/unloading of cargoes in a horizontal direction — by a roll-on/roll-off; the ship is suitable for escort operations, towing and serving oil tankers and/or oil recovery ships; the ship may operate in oil harbour water areas; the ship may occasionally carry bulk cargoes; the ship may carry heavy bulk cargoes (with indication of bulk cargo density), and other entries stipulated by the RS rules (refer also to 1.1.4.8, 1.1.5.1, 1.1.5.2, 3.3.1.5, 3.10.4.1 and 3.12.1.4.3 of Part II "Hull", 1.1.1.2, 1.1.1.3, 1.1.1.6, 1.1.3.1, 2.4.3, 10.3.2.1 and 13.3.10.3 of Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" of these Rules; 2.2.3.1, 3.2.4.1 and 4.2.3.2 of Part II "Life-Saving Appliances" of the Rules for the Equipment of Sea-Going Ships).

2.4.2 Section "Other characteristics" of the Classification Certificate for supply vessels (OS) and other ships serving offshore oil and gas fields (except for mobile offshore drilling units, floating cranes, pipe laying barges and floating hotels), which comply with the requirements of the Code for the Transport and Handling of Hazardous and Noxious Liquid Substances in Bulk on Offshore Support Vessels (OSV Chemical Code), IMO resolution A.1122(30), shall have an entry reading as follows: "The ship is fit to carry hazardous and noxious liquid substances in bulk, as stated in the Certificate of Fitness".

2.4.3 In section "Permanent restrictions" of the Classification Certificate, if necessary, the following information is recorded:

- instructions on strengthening for navigation in ice at a certain draught (record example: "For navigation in ice conditions, the ship’s draught shall not exceed .... m");
- instructions on restrictive properties of ships determined in accordance with the RS rules under which the ships were constructed, and in accordance with the project approved by the Register;
- instructions on restricted speed ranges of the main machinery;
- restrictions on the area of navigation with explanations to them in accordance with the RS rules (for example, in accordance with 2.2.5 of this Part). For berth-connected ships, anchorage location coordinates and, if applicable, geographical service area according to Fig. 4.3.3.5 in Part IV "Stability" shall be indicated;
- instructions on impossibility of the ship to navigate in the water areas and seasonal periods specified in 2.4.1 of Part IV "Stability", for ships whose stability does not comply with the requirements of 2.4 of Part IV "Stability".
2.5 SUMMARY INFORMATION ON DISTINGUISHING MARKS AND DESCRIPTIVE NOTATIONS IN THE CLASS NOTATION OF A SHIP

Table 2.5 contains distinguishing marks divided into mandatory and optional ones, descriptive notations and references to additional requirements of the RS rules that are relevant to a specific distinguishing mark, descriptive notation. On the whole, the ships shall comply with the general provisions of applicable RS rules (including requirements for survey of ships during construction and in service) relating to cargo and passenger ships, self-propelled or non-self-propelled, structures of steel or other materials, as applicable. The general provisions of the RS rules including requirements for survey during construction and in service are not separately given in Table 2.5.

If the relevant requirements of the RS rules for descriptive notations and mandatory distinguishing marks are not met, the ship's class cannot be assigned, retained, confirmed or renewed.

If the relevant requirements of the RS rules for a specific optional distinguishing mark are not met, such an optional distinguishing mark cannot be assigned, retained, confirmed or renewed.

Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships", Section 27 |
3 Descriptive notations (designation of ship type and purpose)

Descriptive notation in the class notation is written in English. At the discretion of the shipowner for ships not engaged on international voyages it may be written in two languages, English and Russian, for example: Oil tanker (нефтеналивное) (ESP). Where required, two or more descriptive notations may be stated in the class notation of a ship, for example: Cable laying vessel Special purpose ship.

The descriptive notation is assigned to ships intended for the carriage of dry general cargoes, that may periodically carry bulk cargoes as well as rolling cargoes in specially adapted spaces. In case the bulk cargoes are carried periodically, the ships the keels of which are laid or which are at a similar stage of construction on 1 June 2010 shall comply with the provisions 1.6 and/or 1.7 of IMO resolution MSC.277(85), as amended, if applicable. If these ships carry rolling cargoes in which the cargo loading operations are performed preferably in a horizontal direction, the requirements applied for a roll-on/roll-off ship (ro-ro ship) shall be met. An entry **ro-ro ship** is added to the class notation of these ships. For ships adopted for rolling-on devices in which the cargo loading operations are performed preferably in a vertical or combined direction (lo-lo, lo-ro ships), the distinguishing mark **Multipurpose (Multipurpose dry cargo ship)** shall be added to the class notation.

</table>

- **Heavy cargo carrier**
  - The descriptive notation is assigned to ships designed for the carriage of heavy and/or bulky cargoes on deck, hatch covers of cargo holds and/or in cargo holds.
  - Depending on the method of cargo carriage, the following distinguishing marks are added in brackets:
    - on deck — **(Deck)**;
    - on hatch covers of cargo holds — **(Hatch cover)**;
    - in cargo holds — **(Hold)**.
  - For distinguishing marks in brackets, the design uniformly distributed static load acting on the relevant structure, in t/m², shall be additionally indicated, for example: **(Deck-15 t/m²)**.
  - Combinations of distinguishing marks may be concatenated within one pair of brackets.
  - At the shipowner’s discretion, for ships intended for the carriage of project (non-standard) heavy cargoes, the descriptive notation **Project** may be added before the descriptive notation **Heavy cargo**.

</tr>
</tbody>
</table>

The descriptive notation is assigned to semi-submersible (docklift) ships designed for the carriage of heavy and/or bulky cargos, for loading and unloading of which the docking method (FLO/FLO — Float-on/Float-off) is used. The descriptive notation Heavy cargo carrier (Deck-t/m²) is a mandatory for ships carrying heavy and/or bulky cargoes. From 1 September 2022, the exclusive descriptive notation Semi-submersible ship is added.

2.6 ALTERATION OF MARKS IN THE CLASS NOTATION

2.6.1 The Register may delete or alter any mark in the class notation in the case of any alteration of, or non-compliance with the requirements defining the insertion of this mark in the class notation.
3 TECHNICAL DOCUMENTATION

3.1 GENERAL

3.1.1 General provisions pertinent to the review and approval (agreement) of technical documentation on ships, materials and products are given in Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships.

3.1.2 Prior to the commencement of a ship construction, technical documentation proving that all requirements of the Register applicable to the ship concerned are complied with shall be submitted to the Register for review. The documentation for review shall be submitted to the Register in electronic form in PDF format, providing its autonomous timeless storage and stamping with the results of documentation review.

Basically two practical alternatives of documentation submission and approval are allowed:

1. submission of plan approval documentation at least within the scope specified in column "PAD" in tables of Chapter 3.2, taking into account the peculiarities and type of the ship without further approval of detailed design documentation;

2. submission of technical design documentation at least within the scope specified in column "TD" in tables of Chapter 3.2, taking into account the peculiarities and type of the ship with further approval of detailed design documentation (refer to column "DD" of the above-mentioned tables). Chapter 3.2 covers only the minimum scope of detailed design documentation to be submitted to the Register. If necessary, the scope of detailed design documentation may be revised by agreement with the Register for each project individually depending on the extent and nature of changes in relation to the technical design.

The technical design documentation approved by the Register does not constitute grounds for assignment of class to the ship. This documentation is reviewed by the Register exclusively as the basis for further detailed design.

Note: The additional technical documentation required by Part XVII "Distinguishing Marks and Descriptive Notations in the Class Notation Specifying Structural and Operational Particulars of Ships" shall also be submitted in the set of technical documentation depending on the distinguishing mark or descriptive notation in the class notation of the ship, and taking into account the requirements of 3.1.9 of this Part.

3.1.3 Documentation, containing the results of calculations, performed using software, shall contain the reference on the name and version of such software.

3.1.4 When the earlier approved documentation is used for construction of a similar ship according to a new contract for construction, the scope of documentation to be submitted may be reduced based on the RS analysis of compliance with the requirements of the RS normative documents that came into force on or after the date of signing of the previous contract for construction for which the documentation was approved.

3.1.5 Depending on the type of documentation, the results of the technical documentation review by the Register are finalized by appropriate stamping of the documents in accordance with 8.2 of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships. Information on stamps for different types of documentation is given in 3.2 and 3.3 of this Part.

3.1.6 Requirements for the scope of technical documentation of a ship under conversion, repair or renovation, transfer of class, as well as during the initial survey of ship not built under the technical supervision of the Register or another classification society, are given in Part I "General Provisions" of the Rules for the Classification Surveys of Ships in Service.
At the same time, technical documentation for conversion of single-hull tankers to double-hull tankers or bulk carriers shall meet the relevant requirements of these Rules taking into account IACS UI SC226 (Rev.1 Dec 2012) set out in the Supplement to rules of Russian Maritime Register of Shipping “IACS Procedural Requirements, Unified Interpretations and Recommendations” (published in electronic form as a separate edition).

3.1.7 Requirements for the scope of technical documentation of materials and products for ships are given in the relevant parts of these Rules.

3.1.8 When alternative design and arrangements being applied on board, deviate from the classification requirements of the RS rules, an engineering analysis shall be submitted for approval by the Register with technical justification demonstrating that the alternative design and arrangements provide an equivalent level of safety to that stipulated by the RS requirements.

During the review of alternative design and arrangements under SOLAS Convention (IMO resolution MSC.216(82)), one should be guided by the provisions of regulations II-1/55, II-2/17 and III/38 of SOLAS 74 with regard to IMO circulars MSC.1/Circ.1002 and MSC.1/Circ.1212.

3.1.9 The technical documentation specified in Section 3 of this Part does not cover operational documentation which is necessary for assignment of class to the ship. With regard to the requirements for operational documentation, the requirements of 4.6 and Appendix 1 of Part II “Technical documentation” of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships shall be met.
### 3.2 DESIGN DOCUMENTATION

**Letter identification and abbreviations:**
- A — Approved;
- AG — Agreed;
- FI — For information;
- TD — Technical design;
- PAD — Plan approval documentation;
- DD — Detailed (design) documentation.

3.2.9 Documentation on systems and piping.

Documentation listed in 3.2.9.1 and 3.2.9.2 shall contain data on pipe dimensions (diameter and wall thickness) as well as on material of the pipes used, hydraulic tests, material of gaskets and types of pipe connections.

Information on piping design (manufacturing technology, heat treatment, methods of inspection, insulation, installation, piping laying, etc.) shall be specified directly in the technical documentation or may be present there as a reference to the shipyard standard or industry standard, the application of which for the ship project is agreed with the Register.

3.2.10 Documentation on electrical equipment.

Technical documentation listed in 3.2.10.2 of this Part shall be submitted by the designer or alternative organization (contracted manufacturer, supplier, shipyard or system integrator). In the latter case, the documentation shall be developed taking into account the solutions adopted in technical documentation listed in 3.2.10.1 of this Part, and shall be submitted for approval at the stage of delivery and installation to the RS Branch Office for technical supervision during construction, together with the documentation according to 1.4.2 of Part XI "Electrical Equipment" of these Rules, approved under technical supervision of electrical equipment as required by Section 10 of Part IV "Technical Supervision during Manufacture of Products" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships.

When the ship is equipped with a refrigerating plant to be surveyed in accordance with 4.1.1 of this Part, documentation specified in 3.2.10.1 and 3.2.10.2 of this Part shall contain the data on electrical equipment of the refrigerating plant.

### 3.2.10.1 General documentation.

3.4 PROGRAMMES OF MOORING AND SEA TRIALS

3.4.1 Programmes of mooring and sea trials shall be approved by the Register prior to commencement of the relevant trials.

3.4.2 The scope of mooring and sea trials shall comply with the relevant requirements of the Guidelines on Technical Supervision of Ships under Construction.

3.4.3 Programmes of mooring and sea trials of ships with distinguishing marks DYNPOS-2 or DYNPOS-3 in the class notation shall contain complete tests of the dynamic positioning system including the tests to verify FMEA provisions.
4 CLASSIFICATION OF REFRIGERATING PLANTS

4.1 GENERAL

4.1.1 For ensuring safety of a ship and preventing ozone-destructive effect of refrigerants on environment the refrigerating plants installed in ships classed with the Register are subject to surveys in the following cases:

.1 refrigerating plants working with Group II refrigerants in accordance with Table 2.2.1 of Part XII "Refrigerating Plants";
.2 refrigerating plants working with Group I refrigerants and comprising the compressors with theoretical suction capacity 125 m$^3$/h and above;
.3 refrigerating plant ensures the functioning of systems affecting the ship safety. It is allowed to install refrigerating plants that ensure the functioning of systems affecting the ship safety and are not subject to survey, provided they are duplicated.

4.1.2 From the number of the refrigerating plants stated in 4.1.1 the Register assigns a class to:

.1 refrigerating plants intended for developing and maintaining the required temperatures in refrigerated cargo spaces of transport ships, as well as in thermal containers to provide proper carriage of goods;
.2 refrigerating plants intended for developing and maintaining the required temperatures in refrigerated cargo spaces, for cold-treatment of sea products (cooling, freezing) and supplying the cold necessary for operation of process plants in fishing ships and other ships used for processing of the biological resources of sea.

Other refrigerating plants from the number of those stated in 4.1.1 subject to the Register supervision are considered unclassed.
4.2 CLASS OF A REFRIGERATING PLANT

4.2.1 General.
4.2.1.1 The Register may assign a class to a refrigerating plant after the ship's construction, as well as assign, or renew a class of a refrigerating plant installed in a ship in service.
4.2.1.2 Assignment or renewal of a class means that the refrigerating plant fully or to a degree considered acceptable by the Register complies with the relevant requirements of these Rules, and that the technical condition of the plant is in accordance with the provisions of design specifications included in the Classification Certificate for Refrigerating Plant.
4.2.1.3 Assignment or renewal of a class shall be confirmed by the issue of a Classification Certificate for Refrigerating Plant after the appropriate survey carried out.

4.2.2 Class notation of a refrigerating plant.
4.2.2.1 The character of classification of a refrigerating plant consists of the following marks:
- REF® — for a refrigerating plant built according to these Rules and surveyed by the Register;
- REF★ — for a refrigerating plant built according to the rules of ACS — IACS member, surveyed by that society during construction and subsequently classed by the Register;
- (REF)★ — for a refrigerating plant built without being survey by ACS — IACS member or without being surveyed by any classification society, but subsequently classed by the Register;
- REF★ — for a refrigerating plant built according to the rules of ACS — IACS member, surveyed by that society during construction and subsequently classed by the Register, if the refrigerating plant does not fully comply with the requirements of Part XII "Refrigerating Plants".

4.2.2.2 Mark of a capability to cargo refrigeration.
If the refrigerating plant has a capacity sufficient to refrigeration of a non-precooled cargo on shipboard during a period of time that provides preservation of that cargo, a distinguishing mark PRECOOLING shall be added to the character of classification.
In such a case, a note specifying the conditions of cargo cooling on shipboard shall be entered into the Classification Certificate for Refrigerating Plant and in the Register of Ships.

4.2.2.3 Mark of capability for cooling or freezing sea products.
The distinguishing mark QUICK FREEZING is added to the character of classification if the plant is intended for cooling or freezing sea products and is in accordance with the relevant requirements specified in Part XII "Refrigerating Plants".

4.2.2.4 Distinguishing marks of refrigerating plants.
4.2.2.4.1 If a refrigerating plant is intended for cooling of cargo transported in thermal containers and complies with applicable requirements of Part XII "Refrigerating Plants", the distinguishing mark CONTAINERS is added to the character of classification of the plant.
4.2.2.4.2 If, in addition to a refrigerating plant, a ship is equipped with atmosphere control system in refrigerated spaces and/or thermal containers which complies with applicable requirements of Part XII "Refrigerating Plants" the distinguishing mark CA is added to the character of classification of the plant.

4.2.3 Additional characteristics.
4.2.3.1 Additional details of conditions for cooling cargoes on board, specified temperature conditions for transportation of cargoes and other details are indicated in the Classification Certificate for Refrigerating Plant and in the Register of Ships if it is found necessary by the Register to specify the purpose or structural features of the refrigerating plant.
4.2.3.2 Number of thermal containers served by the refrigerating plant is indicated in the Classification Certificate for Refrigerating Plant and in the Register of Ships.
4.2.4 Alteration of marks in the class notation.

The Register may delete or alter a mark shown in the class notation in case of any modification or non-compliance with the requirements which served as the basis for the insertion of that mark into the class notation.
4.3 TECHNICAL DOCUMENTATION OF A REFRIGERATING PLANT

4.3.1 Documentation of a classed refrigerating plant.

4.3.1.1 Prior to delivery of a refrigerating plant onboard the ship, documentation with a sufficient scope of information to prove that the requirements of the RS rules for the refrigerating plant are complied with shall be submitted to the Register for review.

In the list specified below, documentation marked with (*) is the documentation, which review results are documented by stamping in accordance with Figs. 8.2-1, 8.2-5 or 8.2-7 (in case of dual classification) of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships. Documentation marked with (**) is the documentation, which review results are documented by stamping in accordance with Figs. 8.2-3 or 8.2-9 (in case of dual classification) of Part II "Technical Documentation" of the Rules for Technical Supervision during Construction of Ships and Manufacture of Materials and Products for Ships:

.1 technical description of a refrigerating plant (**);
.2 circuit diagrams of refrigerant, cooling medium, cooling water systems with indication of places for installation of instruments and automatic devices (*);
.3 arrangement plans of equipment in refrigerated spaces with indication of places for installation of temperature control devices (*);
.4 construction plans of insulation of refrigerated spaces with specification of insulating materials (*);
.5 circuit diagrams of automatic control, protection and alarm systems (*);
.6 list of machinery, vessels and apparatus of refrigerating plant with indication of technical characteristics (**);
.7 list of control devices and measuring instruments, protection and alarm systems with indication of technical characteristics (**);
.8 drawings of sealing and flexible joints with indication of details on materials (*);
.9 list of equipment of the atmosphere control system, including control and automatic devices (**);
.10 drawings of installation and fastening of machinery, vessels and apparatus (*).

4.3.2 Test program (*).

4.3.2.1 Test program with indication of the method of design cooling load generation (including a calculation of the power of additional heaters to be used) and the method of determining the actual averaged heat-transfer coefficient for the insulating structure of refrigerated cargo spaces shall be approved by the Register prior to commencement of the relevant tests.

4.3.3 The scope of tests shall comply with the relevant requirements of the Guidelines on Technical Supervision of Ships under Construction.

4.3.3.1 Prior to delivery of a refrigerating plant on board the ship, documentation listed in 4.3.1.1.2 and 4.3.1.1.3 (for refrigerant only), 4.3.1.1.5 (for protection and alarm system only), 4.3.1.1.6, 4.3.1.1.7 (for gauges in refrigerant system and protection and alarm devices only), 4.3.1.1.10 shall be submitted to the Register.
